

Shifts all system

debris

Sentinel System Filter, the solid, reliable, cost effective solution to shifting all types of system debris.

A compact, robust, fully sealed brass unit, the Sentinel System Filter is quick and easy to fit and will last the lifetime of the system, helping to eliminate those un-wanted call backs, saving you time and your customer money. The unit removes all debris, not just magnetic, protecting the boiler and maintaining design efficiencies.

With no moving parts it will not clog and is very easy to clean and maintain, with no magnets to remove, no need to dismantle and no valves to shut off.

Sentinel System Filter is designed for use in conjunction with the X800 and X100 flushing and inhibiting process to achieve optimum cleaning, improved performance and maximum efficiency.
